

VESTA

For more simplicity in your laundry room

Reserving washing machines straightforwardly online, paying for their use and completing all the admin tasks – that’s how V-ZUG’s VESTA system makes everyday life easier for building managers and tenants.

What is VESTA?

VESTA is a digital online management and payment system for communal laundry rooms, which makes life easier for building managers and tenants. Tenants reserve and pay to use washing machines on their computer or smartphone, while building managers can complete all their admin tasks simply and easily online.

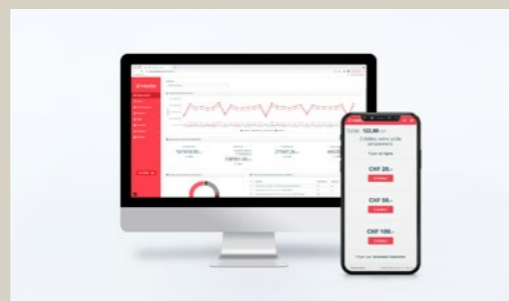

This digital product can also be networked with older V-ZUG appliances as well as with washing machines and tumble dryers made by other manufacturers.

Benefits for building managers

- Complete transparency thanks to an overview of all usage data
- Optimized resources and cost savings thanks to reports
- Owners set up access for multiple building managers, and building managers can define different access rights for employees, generating a clear system of access control
- Can be easily integrated into other tenant platforms such as “Allthings”
- Convenient access via tablet or computer

What does V-ZUG do for you?

On site, we ensure that the mobile network connection* is robust, we install the system and we commission it. We also look after the operating contract between you and eeproperty. And so that your tenants will always know how VESTA works, we post brief instructions in your laundry room.

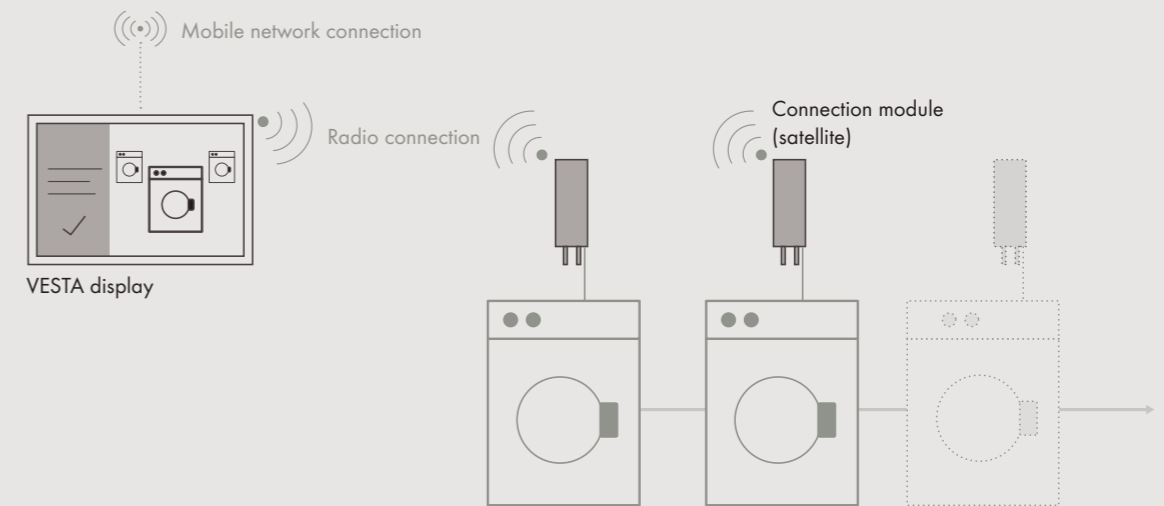

Benefits for tenants

- No coins or laundry cards needed any more, thanks to payment via the online platform or payment slips
- Easy to use
- Planning and booking washing time slots online
- Washing machine information provided via smartphone (e.g. when the wash cycle has finished)

You can find additional benefits for building managers and tenants on our website at vzug.com/vesta

What’s needed in order to operate VESTA?

Your laundry room just needs to have a reliable mobile network connection*. We install the display and the connection module that links your laundry appliance with the eeproperty online platform. Thanks to their space-saving dimensions, the VESTA components will fit into all laundry rooms.

The VESTA display

The display is simple and intuitive to use. Using the touch screen, tenants can turn appliances on and off, and display their current credit. The OGS safety glass display is extremely resistant, sturdy and durable. Up to 32 appliances can be controlled via the same display.

Prices incl. VAT

Display	CHF 1,350 net
Installation	CHF 290 net

The connection module (satellite)

The module ensures that the duration of the selected programmes will be transmitted from the appliance to the system operator. One connection module is required for each appliance. The module operates via a radio link. Radio technology ensures the quality of the connection is always robust.

Prices incl. VAT

Connection module (satellite)	CHF 650 net
Installation	CHF 140 net

*Please note that, in certain cases, additional costs may be incurred for ensuring the mobile network connection in the laundry room is reliable (max. CHF 1,500).

Where can I get more information on VESTA?

We would be pleased to introduce VESTA to you in person. Advisors at our exhibition and advisory centres (ZUGORAMAs) can demonstrate the system's key functions (please phone in advance to make an appointment). And our field sales staff will be pleased to hear from you.

You can find full information
on our website at
vzug.com/vesta

VESTA is operated directly by V-ZUG and not via a specialist retailer.
