

CookTop V6000 Integra

The CookTop V6000 Integra is the idea of letting technology step back – so that form, material and light merge in the kitchen into a single, quiet surface. From a monolithic surface made of the purest natural minerals (MDi, or Minerals, Design, innovation), a surface emerges that connects cooking, preparation and living – without ever losing its elegance. The induction beneath remains invisible until it is needed – and disappears again as soon as the moment has passed.

Pure surface. Pure form.

The CookTop V6000 Integra transforms the worktop into a single, continuous mineral surface, which can also be extended beyond the cooking area. The induction underneath is powerful – yet almost invisible. The result is a space that exudes tranquillity and brings pure timeless design to life.

Touch becomes control.

A tactile control element with substance: high-quality, precise, familiar. In a world full of touchscreens, it brings haptics back into the kitchen. The LED frame of the hob responds with subtle light and intuitively guides the eye without disrupting the surface.

Beauty that lasts.

The MDi material, made from the purest natural minerals, is aesthetically pleasing, durable and made for real life. It withstands heat, cold, cuts and heavy use – while remaining an architectural statement. Available in three colour variations, it transforms every kitchen into a unique space.

A space that connects.

The CookTop V6000 Integra redefines the kitchen – even where space is limited. A single, seamless surface that transforms: hob, worktop and dining table. It opens up the space, invites you in and brings people together. For the moments you share – and that last a lifetime.
