

Product Sustainability Report (PSR)

Cooling category

Product Sustainability Report (PSR)

The Product Sustainability Report (PSR) provides information about the sustainable aspects of the relevant product category. This is based on extensive environmental data from detailed life cycle assessments (LCAs).

Life cycle assessment (LCA)

under DIN EN ISO 14040

Tools

SimaPro, EcolInvent, UVEK environmental database

Perspectives

Cradle-to-cradle and cradle-to-gate; assessment based on three methods: CO₂ footprint measured in CO₂, the ecological scarcity method measured in environmental impact points and the monetary equivalent value method measured in Swiss francs (CHF).

Category

Cooling

Issued by

V-ZUG AG, Industriestrasse 66,
6302 Zug, Switzerland

About V-ZUG

We have been developing, creating and producing appliances that bring simplicity into our customers' homes and creativity into their kitchens since the company was founded in Zug in 1913.

Our responsible approach to manufacturing high-precision and long-lasting products allows us to make an active contribution to a sustainable future.

V-ZUG has branches in the EU, the UK, China, Hong Kong, Singapore and Australia and distribution partners all over the world, but it is in Switzerland where appliances, and decisions, are made. V-ZUG currently employs a total of around 2,200 people. Organisationally, it consists of the segments Household Appliances and Real Estate.

Timeless design

Our design language is reduced to the essentials. It makes no compromise in quality, materials and sustainability. The user interaction with the products is carefully crafted to be as intuitive as possible, building an emotional connection to our products.

Innovation that matters

We work hard every day to bring simplicity to your home and creativity to your kitchen.

We are known for innovative products. We focus on user-friendliness, longevity, reliability, performance and energy efficiency. Our proximity to customers provides us the insights to design the right programs and functions to reach perfect results. Allowing us to simplify your life at home.

Service

Our qualified service team assists our customers throughout their journey with V-ZUG – from choosing the right appliance for their needs to troubleshooting in the event of an issue, error report or code. We guarantee our customers the help they need.

Every day, we give our all to ensure customers are satisfied with our products and receive the best service. With more than 700 service experts around the globe, we are there for our customers whenever they need us.

Swiss by Origin

As a company, when the brand name coincides with that of the location in which you operate, you feel a mix of pride and responsibility. For the community you are part of and for your impact on people and resources. We are here to stay. And committed to keep investing.

Production location in Zug, headquarters, vertical factory

We have made a conscious decision to remain true to our long-standing production location in Switzerland. To ensure we are optimally prepared for the future, we are part of a visionary urban manufacturing project: the Tech Cluster Zug. Because we are striving tirelessly to achieve state-of-the-art production facilities and improve our environmental footprint, we have not only built our own vertical factory, but also a Multi-Energy Hub.

Production location in Sulgen, the most modern refrigerator factory in Europe

We are proud to have opened Europe's most state-of-the-art refrigerator factory in Sulgen in 2022. Here, both products and processes are committed towards maximum sustainability – be it with regard to the energy efficiency of the appliance or the CO₂ neutrality of the production set-up.

Swiss Made

V-ZUG produces more than 80% of the appliances it sells in Switzerland in Zug and Sulgen (2023: 82%, Swiss market). All appliances manufactured in Switzerland meet the strict Swiss Made requirements (i.e. > 60% value generated in Switzerland) and are certified accordingly (Swiss Made, protected designation).

We also have at our disposal a key network of suppliers. More than 60% of our suppliers are based in Switzerland, 30% in neighbouring countries (primarily Italy, Austria, Germany) and roughly 10% are from Asia (primarily electronics).

Sustainability at V-ZUG

Sustainability. We see it as the driving force behind the development of our products, the services we offer, the way in which we manufacture, and how we contribute to a society that is fit for the future. Sustainability at V-ZUG comprises three dimensions:

People

Our commitment to our employees and our environment is our top priority – we never cease to invest in these. The wellbeing of our employees, our customers and society as a whole is the driving force behind our aspirations and big ambitions for positive change.

Planet

We manufacture ultra sustainable appliances with the utmost efficiency. We boost the circular economy and our production processes have been CO₂-neutral since 2020, all the while staying true to our motto: achieve the goal first, talk about it later.

Profit

Our success is based on quality, design and durability. These values are reflected in our projects too. Far from being geared towards short-term profit maximisation, they will secure the future of our company for generations to come.

The circular economy

For us, a sustainable product starts at the development stage. This early stage is where we can most effectively influence its “long-term” sustainability. This is when we concentrate on aspects like the durability and repairability of the appliances, low energy and water consumption in use, material selection and modular design – all very much with the circular economy in mind.

We have encapsulated our commitment to sustainability in four targets which provide the framework for our goals, activities and reporting.

Products and services for a future-fit society

Producing an energy-efficient appliance is just one of many sustainability aspects. We think ahead. From procurement, development and manufacturing and servicing right through to re-use and recycling, sustainability throughout the entire life cycle of the appliance is more than just a consideration for us: it is the goal. Measurable, definable and achievable.

Resilient and committed employees

A workforce we care about and whose work is close to our heart. The quality of our products depends on our employees. That is why we incorporate them in the strategic direction of the company, promoting an open, fair and safe working environment, encouraging and facilitating life-long learning and offering a wide range of advancement opportunities.

Environment and climate protection

Thanks to extensive research, measurements, analysis and investment, we have reduced and offset our CO₂ footprint. Our manufacturing operations have been entirely carbon-neutral since 2020. With an internal CO₂ levy, pioneering carbon dioxide reduction initiatives, a life-cycle analysis as well as a reforestation programme we are pursuing real sustainability and setting an example for others.

Entrepreneurship for sustainable prosperity

We are committed to our Swiss location and have invested over 50 million Swiss francs a year in our local production infrastructure in the last three years alone. Our quest for profit, our business partnerships and our entire management set-up are geared towards ethical and sustainable practice and fall in line with our binding code of conduct.

Results of life cycle assessments (LCA)

Product category: Cooling

Product name: CombiCooler V2000,
Cooler V2000, WineCooler V4000

Energy labels (EU): see specific product, varies
depending on C-G model

Recycling quota*: 69 – 93%

Recovery quota*: 91 – 97% (recycling including
combustion with heat recovery)

*Based on own method reflecting the current
state of recycling technology in Switzerland

**Stiftung Sens recycling quota for the
refrigeration category:**

83% (according to 2024 annual report)

Example for CombiCooler V2000.

All other energy labels are
available at vzug.com

Underlying data for the life cycle assessment

Country of manufacture ¹⁾: Switzerland

Country of use ²⁾: Switzerland

Electricity mix ³⁾: as per Swiss average:
181g CO₂/kWh

User behaviour: normal use based on declara-
tion data for annual use ⁴⁾ over 12 years ⁵⁾

Underlying data background:

1) All appliances with the Swiss Made designation are manufactured
in Switzerland.

2) The life cycle assessments relate to use of appliances in Switzer-
land with the corresponding Swiss electricity mix. If the appliance is
used in another country, the corresponding results can be request-
ed from V-ZUG.

3) The electricity mix is based on the Swiss average. The emissions
from electricity consumption depend on electricity generation.
The more sustainable and renewable electricity production is, the
smaller the environmental footprint. This can vary significantly from
one energy supplier to another. The influence of emissions caused
by electricity production is very high.

4) Usage behaviour: theoretical usage behaviour based on inter-
nal definitions is used for calculation. Sometimes this is based on
service data, other times it is based on the regulatory requirements
for the energy label assessment. Usage behaviour with regard to
intensity influences the result considerably.

5) V-ZUG defines a theoretical lifespan in years for each product
category; this is used as a basis to review the quality in develop-
ment/production. But, in reality, the lifespan depends on a number
of different factors, intensity of use and care being the most crucial.
The lifespan in years also includes potential repairs during this time
and beyond. Great importance is attached to repairability (availabili-
ty of spare parts and repair expertise in the service department).

Life cycle assessments are carried out using three different methods/perspectives.

CO₂ footprint in CO₂e/kg:

greenhouse gases differ in their global warming potential (GWP). The climate impact of carbon dioxide (GWP of CO₂ is equal to 1) serves as a benchmark, i.e. the global warming potential of other substances are measured relative to CO₂. The GWP value/CO₂ equivalent indicates the global warming potential of a substance and thus its contribution to the warming of the atmospheric boundary layer.

Environmental impact points:

The method of ecological scarcity provides a comprehensive picture of the environmental footprint and, in addition to the greenhouse gas potential, includes other impact categories such as noise, water, land use, acidification of the soil, toxicity to humans and ecosystems, etc. This method was introduced by the Federal Office for the Environment in Switzerland in 2011 and is constantly being adapted to take into account new findings. The unit is environmental impact points.

Monetary equivalent in CHF:

In cooperation with the Lucerne University of Applied Sciences and Arts (HSLU), V-ZUG has developed a method that shows the environmental costs which, along with the footprint, serve as a basis for the life cycle assessment (in environmental impact points). In most cases, these costs are borne by society. The value is expressed in Swiss francs and is included as a shadow price in V-ZUG's business case considerations.

Important note:

the ecological footprint in the use phase depends largely on the usage behaviour (programme selection, intensity, care, etc.), as well as the electricity mix used.

Scope of life cycle assessments:

Life cycle assessments cover the entire product life cycle from production, packaging, use and transport to recycling/disposal (cradle-to-cradle). The "manufacturing" section (also known as grey energy) includes all the materials used as well as the manufacturing process (cradle-to-gate).

Representation of life cycle assessments in the appliance category

The following three life cycle assessments form an informative insight into the diverse refrigeration range with its varied installation sizes and features. In addition to its own products, which are all manufactured in Switzerland (refrigerator factory in Sulgen), V-ZUG also offers extra products manufactured by trusted partners. These products are produced in Germany, Italy, Austria, Bulgaria and China. They account for approx. 5 - 10% of the quantities.

Life cycle assessments (LCA)

CombiCooler V2000

Cooler V2000

Life cycle assessments (LCA)

WineCooler V4000

	in % in kg CO ₂ e	in % in EP	in % in CHF
● Manufacturing (cradle-to-gate)	52.6 184	50.0 507,000	67.0 321
● Packaging	1.9 7	1.1 11,500	0.9 4
● Transport	0.7 3	0.5 4,590	0.4 2
● Use - Electricity	42.9 150	46.5 472,000	31.4 150
● Recycling/Disposal	1.9 7	1.9 18,975	0.3 2
Total (cradle-to-cradle)	100.0 350	100.0 1,014,065	100.0 478

The values of the different models and items vary due to slight differences in design and energy efficiency. Please refer to the technical data on the website for the detailed value per model offered (in absolute figures, CO₂, environmental impact points and monetary equivalent).

Our commitment to sustainable products

Across all products generally:

- How we design and refine appliances
 - Focus on quality and durability
 - Based on the principles of the circular economy
 - Ongoing improvement energy and water efficiency
 - Enabling repairability (up to 15 years' spare parts availability, extensive repair expertise extending beyond 15 years, competent service teams)
- How we manufacture the appliances
 - Use of 100% renewable electricity in our production operations in Switzerland (from Swiss hydroelectric power)
 - CO₂-neutral production in Switzerland (ongoing reduction of footprint, offsetting residual emissions in the V-For-est (high-quality reforestation)
 - Internal CO₂ steering tax on scope 1+2 emissions (CHF 120/t CO₂)
 - State-of-the-art production facilities and building
 - Advanced waste management
- Resilient and committed employees
- Assuming responsibility in supply chains (human rights, child labour, conflict minerals)
- Driving the transformation from a recycling economy to the circular economy
- Driving forward the decarbonisation of our own vehicle fleet (service vehicles, lorries)

Specifically for CombiCooler, Cooler and WineCooler:

- **High-quality vacuum insulation panels (VIP)** prevent heat from penetrating the appliance, boosting its energy efficiency. The thin design of the VIPs enable a large usable volume despite the high level of insulation.
- **Four active heat exchanger modules**, each of which is equipped with a fan, boost the refrigerator's heat exchange efficiency and performance.
- Natural **refrigerant R600a** (isobutane) is used exclusively in all V-ZUG refrigerators. This refrigerant has an ODP (ozone depletion potential) of "0" and a GWP-AR5 (global warming potential) of "3", making it **more environmentally friendly than other refrigerants**.
- In the event of a breakdown, V-ZUG **refrigerators can maintain chilled storage for up to 16 hours**, which sets the benchmark in the industry.
- High-quality **racks made from Swiss beech wood** are used in the WineCooler.
- V-ZUG Kühltechnik AG maintains a long-standing partnership with Obvita, which is dedicated to **the professional and social integration of people with visual impairments and mental health issues**. As part of this collaboration, an Obvita working group **regularly undertakes assembly work in V-ZUG's refrigerator production division**.

Your contribution to a more sustainable use of our appliances

A large part of our environmental footprint is caused by the use of our appliances. V-ZUG supports an ecological use of the appliances with the following tips and hints:

- **Limit the time that appliance doors are open and only open them as often as is necessary.**
- Allow warm or hot food/products **to cool outside the appliance.**
- Store moisture-releasing foods **in sealed containers or covered** in the refrigerating section. Moisture reduces refrigeration performance.
- To ensure optimum air circulation: **do not store food/goods too close together.**
- Leave **drawers**, glass shelves and door trays in the default **arrangement where possible.** This ensures optimum temperature distribution and efficiency.
- **Be smart when it comes to food shopping.** Before going shopping, it's always worth having a look in the fridge to see what you already have. You should only buy what you really need. Opt for small or packaged portions and be wary when it comes to promotions. Opt for local and seasonal products where possible. A small snack before going shopping can help ensure you don't buy more than you need, because shopping hungry often leads to overbuying.
- **Tips for preventing food waste:** "use by",

"sell by" and "best before" dates have different meanings. If the "use-by date" has been exceeded, you shouldn't consume the food. Otherwise, don't just go by the dates, but trust your senses – sight, smell and taste – to determine whether the food is still worth eating. Store food leftovers in transparent containers and position these so they aren't forgotten. Consume the food within one to three days. If you've bought more than you can eat, most foods can be frozen (bread for up to three months, and certain animal products for up to a year). When it comes to animal products, ensure that the cold chain is not broken. Good organisation is key – use the first-in, first-out principle for perishable foods like fruit and vegetables: keep older products at the front, new ones at the back.

- **Use appliances for as long as possible** and have them repaired in the event of a fault. When deciding whether to buy a new product or repair an existing one, take into account grey energy and progress in energy efficiency.
- Buy **renewable electricity** for your own household (contact your electricity provider), or produce your own electricity using a photovoltaic system.
- **Support the V-Forest** climate protection project: offset electricity consumption and the resulting CO₂ emissions through V-ZUG's CO₂ webshop ([Offsetting CO₂ with V-ZUG](#)).

Durability, repairability and customer loyalty

To make a statement about durability, repairability and customer loyalty, we analysed our service data across all product categories for 2023 in more detail. Our service technicians were called out for services over 200,000 times (appliance defective). In each case, we looked at how old the appliance was at the time, whether we could still repair it and whether the customer still wanted to repair it or replace it with a new one.

Results:

- In 43% of cases, the appliances were older than 10 years – the repair rate for 10 years is 90%.
- In 20% of cases, the appliances were older than 15 years – the repair rate at 15 years is 80%.
- In 6% of cases, the appliances were 20 years or older – the repair rate at 20 years is 75% and at 30 years it is still over 60%.
- The oldest appliance (washing machine) was 44 years old; the customer still wanted to repair and we were able to do so (spare part and expertise were still available).
- The result only reflects appliances we were able to assess because of a service call. Not shown here are appliances in good working order and those replaced straight away because of their already advanced age.

Conclusion:

- Our appliances have a very long service life.
- We can perform repairs even on older appliances (spare parts availability and service expertise)
- The repair service is attractively priced. The majority opt for repair and continue to do so over a long service life.
- Customers are happy to repair because they are very satisfied with the product. Otherwise, they would change appliance or even brand.
- Note: repairing a 25-year-old washing machine makes only limited sense, as the energy efficiency of the successor would be much better and offset embodied energy relatively quickly. Of course, the customer's wishes always come first.
- For perspective: approx. 60% of V-ZUG's appliances on the Swiss market are serviced by V-ZUG's own service department (there are approx. 5.7 million VZ appliances on the market).

Summary

Manufacture is influenced primarily by V-ZUG

Use is influenced primarily by the user

CombiCooler V2000

● Manufacturing (cradle-to-gate)	40.8		331
● Packaging	1.4		11
● Transport	0.4		3
● Use - Electricity	55.1		447
● Recycling/Disposal	2.4		20
Total (cradle-to-cradle)	100.0		812

High-quality vacuum insulation panels (VIPs) boost insulation and save energy

Extended storage capability in the event of power cuts

Collaboration with institution Obvita in production. Inclusion of people with disabilities

Ample space thanks to a streamlined design and high energy efficiency

Active heat exchanger modules boost energy efficiency

R600a refrigerant (isobutane) is more environmentally friendly than other refrigerants

WineCooler: high-quality racks made from Swiss beech wood

Facts

- Swiss Made
- Focus on quality, durability and energy efficiency
- Designed for reparability and the circular economy
- State-of-the-art production facilities in Zug and Sulgen
- Responsible supply chains
- Resilient and committed employees
